

# LiNA SeaStar™ and LiNA Skin Hook™

Complete single-use system for  
retracting soft tissue from the  
operative surface

*Elastic Retraction System*

Innovation in Gynecology

# LiNA SeaStar™ and LiNA Skin Hook™

The LiNA SeaStar™ and LiNA Skin Hook™ offer a single-use solution for retracting delicate soft tissue. The flexible design of the system allows adjustment and repositioning of the LiNA SeaStar™ during the surgical procedures and provides exposure of the surgical site.

**Visibility.** Self-retaining.

**Freeing the hands of the surgeon**

The LiNA SeaStar™ and LiNA Skin Hook™ provide improved surgical space and visibility. Allowing you to focus on operating, teaching and training rather than retraction.

**Versatility.** Broad range of available options.

**LiNA SeaStar™**

The LiNA SeaStar™ is provided in a broad range of shapes and sizes. The frames can be adjusted to fit various anatomical areas, thereby facilitating different surgical applications e.g. vaginal and rectal surgery and other surgical disciplines.

**LiNA Skin Hook™**

The LiNA Skin Hook™ is available with four different stainless steel hook options: small sharp, small blunt, small angled extra sharp, large blunt. The flexible, elastic bands can be adjusted during the procedure to create optimal tension.

Prepare and drape the surgical area in usual manner. Apply the LiNA SeaStar™ according to the following steps:

1. Place the LiNA SeaStar™ around the initial incision and insert the LiNA Skin Hook™ in directly opposing quadrants with equal tension.

2. As dissection progresses, move the position of the LiNA Skin Hook™ into the deeper layers of fascia. You may then add new LiNA Skin Hooks or reposition those already in place to achieve full balanced retraction from any angle.

3. To ease closing, maintain constant opposing tension.

# LiNA SeaStar™ and LiNA Skin Hook™

The LiNA SeaStar™ and LiNA Skin Hook™ are single-use.
